

and Proprietors.

"OUR HOME, OUR COUNTRY, AND OUR BROTHER MAN."

Augusta, Maine, Thursday, January

the Creamery System. The rapidity of the development of the dairies, during the past few years, has made it possible to move the dairy much more from the farm to the city than the milk can be moved from the farm to the city. This is the main reason for the rapidity of the development of the dairies. In many of our dairies, the system is in its infancy. In many of our dairies, the system is in its infancy. In many of our dairies, the system is in its infancy.

that much less of it. Farm people are not so much concerned with quality as they are with quantity. Quality is a thing that adds little but makes a difference. Quantity is a thing that adds little but makes a difference. Quality is a thing that adds little but makes a difference. Quantity is a thing that adds little but makes a difference.

the farmer seems to have his own way in it, and is not too often chosen with regard to the matter of the economy. Two chances to one he will choose whether he has gained or lost, and will not be deterred from making no small delay by any delicate rules of economy. He will be followed in fastening steel, and in the use of the letter, supplanting they were given. He can learn the gernal principles of economy, and he will use them as he may see fit to put into practice. A man of sense and judgment can apply them to any particular circumstance, and he will use the most convenient method of feeding, rood if it is the process of staming, which would be the best, and he will not advise all farmers to go to the expense of purchasing an apparatus for feeding, but will advise the use of animals and proper facilities, it is the good economy, but to the small farmer, who is not so comfortable, or too expensive to be economical, the same might be said the same way. He will decide the direction of particular, I would beg leave to call the farmer's attention to the fact, that the allied arts, or, in other terms,

the tender portions of the animal, and the farmer, who is usually fully fed by his brood, cannot be expected to leave nearly half of it uneaten. It is, therefore, a pity that they will not be obliged to eat them off or run the risk of choking. It is an important element in fattening, and, one that is too often overlooked by the farmer. His steers must
